What is claimed is:

1. An assembly for use with a hearing aid plug for insertion into the ear canal of a user and having a sound port in a front surface of the plug facing towards the user's ear drum when so inserted, the assembly comprising a stem for being engaged with the sound port for mounting the assembly on the hearing aid, said stem being hollow and providing, when mounted on the hearing aid, a hearing aid second sound port disposed inwardly of a structure providing diversionary paths for fluid-like substances within the ear canal in directions past and spaced apart from said second sound port.
